

BroadSpan Advises Brazil's ouronova on Strategic Equity Raise

Rio de Janeiro, Brazil – March 2026 – We are pleased to announce that BroadSpan Capital acted as exclusive financial advisor to Ouro Negro Tecnologias em Equipamentos Industriais S.A. ("ouronova") and its shareholders on an equity capital raise with an undisclosed international strategic investor. The proceeds will support the scaling of ouronova's commercial operations and the continued development of next-generation technologies for the offshore energy sector.

Founded in 2010 and headquartered in Rio de Janeiro, ouronova specializes in the development and commercialization of monitoring, control, and inspection solutions for the energy sector, with an increasing focus on supporting energy diversification. The company employs an open innovation model, leveraging the National Petroleum Agency levy funds to finance its projects through partnerships with leading oil and gas players. Since 2012, ouronova has filed more than 30 patents, of which 10 have been granted across Brazil and five other jurisdictions. In 2024, ouronova launched an expansion plan aimed at accelerating the commercialization of its existing portfolio, particularly in the riser monitoring and robotic inspection segments, while advancing the rollout of new products and services currently in final development stages, including well completion, well intervention, and well integrity solutions.

"We are very pleased to have supported ouronova in identifying an ideal strategic investor by leveraging our experience in the energy and oilfield services sector, and working through not only BroadSpan's presence in the U.S and Latin America, but also through our international partners around the world," commented Leonardo Antunes, Head of BroadSpan's Brazil operations.
